**(54) VIDEO RESERVATION METHOD, VIDEO RECORDING DEVICE, AND VIDEO RECORDING RESERVATION SYSTEM**

**(57)Abstract:**

**PROBLEM TO BE SOLVED:** To avoid errors in video recording by changing a reserved content of a program whose reservation is executed.

**SOLUTION:** When a state of the video recording device is discriminated to be video recording, the confirming state of reservation contents is automatically transited, a voice of a program during video recording is heard by a caller telephone set to confirm and revise the reserved contents. As to the confirmation of the reserved contents when video recording is executed, the set reserved contents are confirmed through a telephone line by voice guidance. The reserved contents recorded actually are confirmed by an audio signal of the program when video recording of it is executed. When the change in a broadcast time of the program is recognized by the contents of the audio signal, the reserved contents whose video recording is executed are changed (reservation end time is revised) or a new video recording reservation is set. The contents of the revised reservation are stored in a memory. Thus, the interruption and a video recording medium of a definite amount is effective.

## LEGAL STATUS

**[Date of request for examination]**

23.05.2001

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]
